

305 Montgomery Street, Suite #3
Decorah, IA 52101

Did you know?

Health authorities know that the immune response from vaccination for COVID-19 is actually more robust than from natural immunity.

This is which is why Public Health and other healthcare providers recommend that people get vaccinated even if they have had COVID before.

The other thing with natural immunity versus vaccine immunity is that having some level of vaccine immunity will help your body develop antibodies faster if you are ever exposed to a case and become ill yourself, therefore shortening your illness and reducing the severity, whereas if you had no immunity going into the infection, your body will have to start from scratch and therefore will potentially fare far worse (as we are seeing now with unvaccinated folks making up most of our hospitalizations and deaths).

Covid-19 vaccines are still available at your local Public Health office, healthcare providers, and local pharmacies.

Call and get vaccinated!!! Call 563-382-4662 to set up appointment today.
